TU BÔNG PROJECT, VIETNAM

Context and objectives

MAIN THEMES

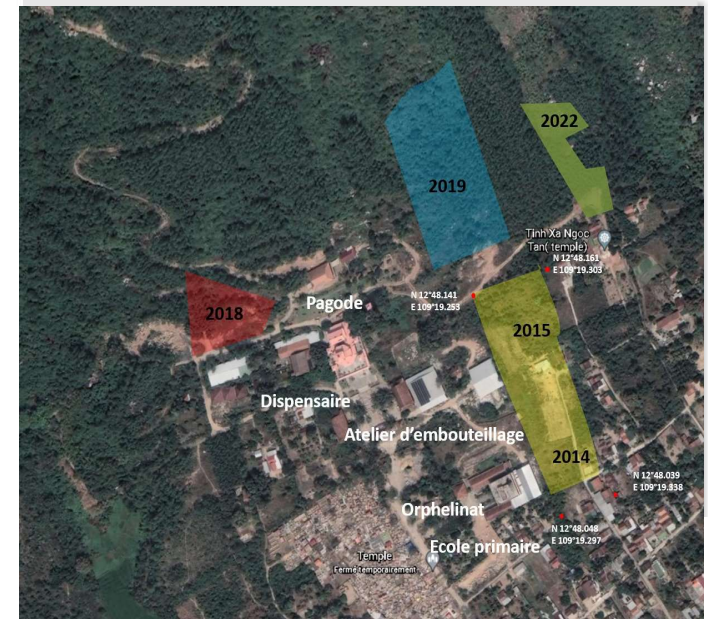

- Reduce **soil erosion** and **drought issues** that affect local farmers;
- **Increase the resilience** of small-scale rice farmers by securing agricultural **yields** and developing additional new sources of incomes (fruits, timber);
- Fight against the local deforestation;

SPECIFIC CONTEXT

Due to the deforestation of mountainous areas in Khanh Hoa Province, soil erosion has brought a lot of sands to rice fields and caused serious droughts. As 80% of the villagers cultivate rice for a living, it has become a necessity to take action to preserve agricultural yields.

The plantation of trees along the rice fields and in deforested areas will help to preserve water resources and bring back a local biodiversity, while preventing sand shifts and helping farmers to continue to live from their traditional rice cultivation.

LOCATION

Tu bông village, Khanh Hoa province, Vietnam

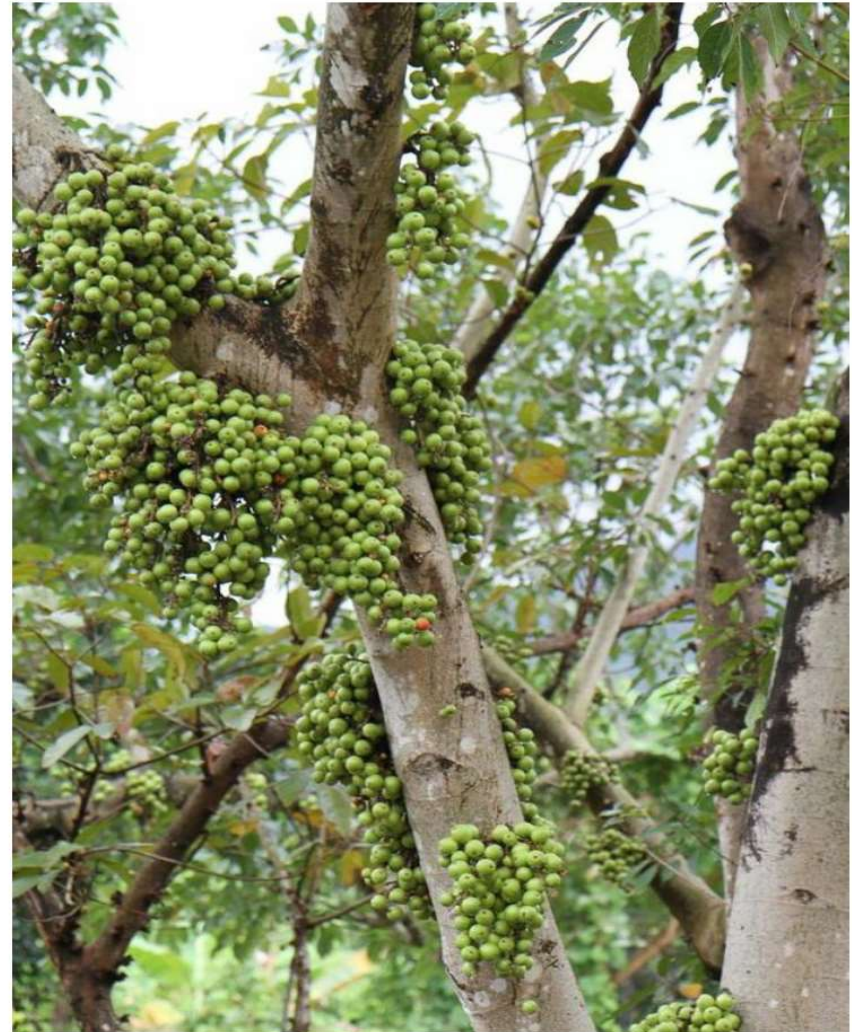

- Tu Bông Village is located in Van Phuoc commune, Van Ninh district, Khanh Hoa province.
- Due to the **deforestation of hillsides in the region**, soil erosion has brought a lot of sands to rice fields and caused serious droughts.
- As 80% of the villagers cultivate rice for a living, it has become a necessity to **take action to preserve agricultural yields**.

SPECIFIC OBJECTIVES

Securing the agricultural yields small-scale rice farmer

- **Reducing erosion** and sand shifts that seriously affect rice cultures;
- **Raising awareness on sustainable agricultural practices:** reducing slash and burn, preserving forests, using environmental services provided by trees for improved rice cultivation (organic fertilizer, pest control, water regulation, biodiversity...)
- Diversifying the production of **healthy local food** with fruits for villagers, in particular children;
- **Adding new sources of income** through the sales of timber and fruits;
- **Creating links** between villagers, children of the local welfare unit and partners through planting activities.

PLANTATION ACHIEVED

778 planted trees

	2022	TOTAL
Number of parcels	1	1
Number of trees distributed	778	778
Number of dead trees replaced	Ongoing in 2023	Ongoing in 2023
% mortality (replaced trees)	Ongoing in 2023	Ongoing in 2023
Surface area	8'000 m2	8'000 m2

PLANTATION ACHIEVED

Tree species and mix

TREE SPECIE	LOCAL NAME	TOTAL TREES
Psidium guajava	Guava - Goyavier	500
Artocarpus heterophyllus	Jackfruit - Jacquier	100
Annona muricata	Soursop - Corossolier	100
Khaya senegalensis	Caïlcédrat - acajou du Sénégal	100
TOTAL	With a nursery stock	800

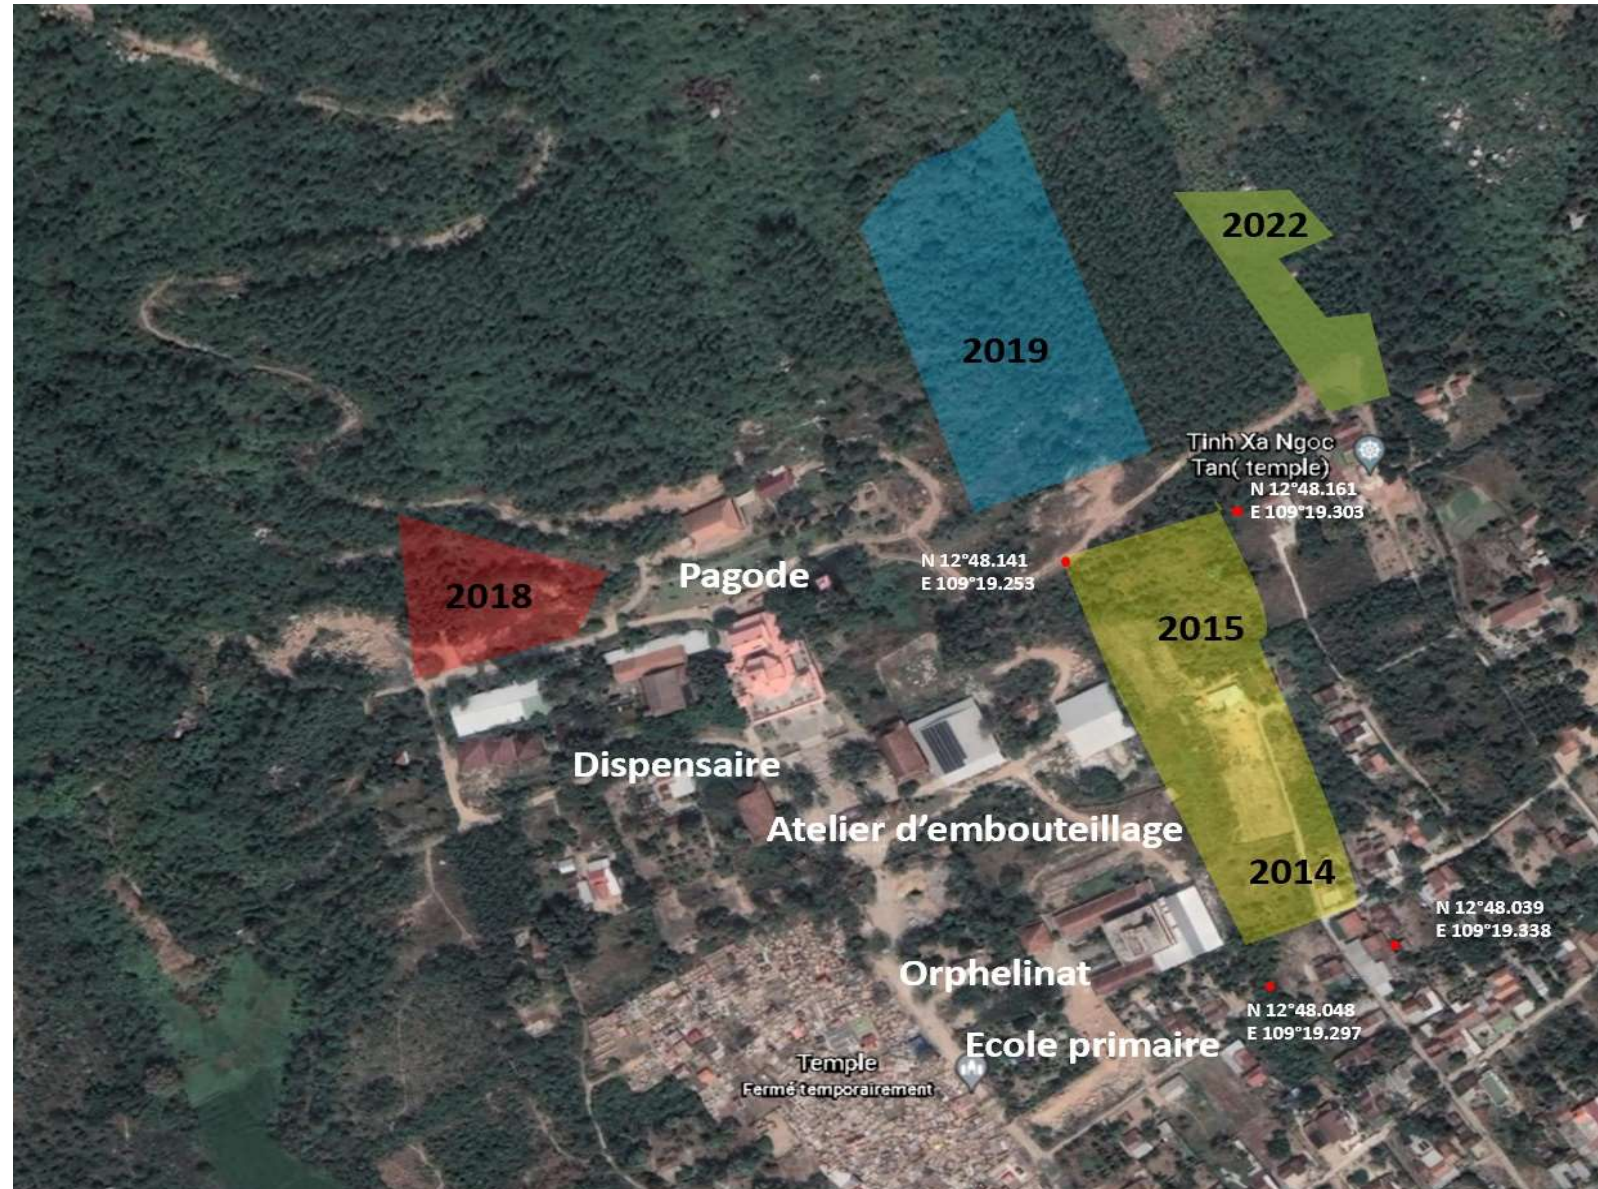

PLANTING ACTIVITIES

Identification of plantation site

This plantation (2022) is on a single plot to the east of pagoda.

N 12°48'161
E 109°19'303

PLANTING ACTIVITIES

Plantation in the mountain

778 trees were planted at the base of the mountain near the pagoda and the village

The trees were planted on the slope of the mountain to reduce erosion problems

PLANTING ACTIVITIES

Transport of the seedlings

Villagers have to carry the seedlings on their back to the plantation site

PLANTING ACTIVITIES

Transport of the seedlings

Discussions and field training are led with villagers to involve them in the project for sustainability of the plantations.
